Commercial Grade - Tough Deck 150mm wide composite decking boards are a commercial grade heavy duty decking board. Unlike domestic grade WPC which has a cheap high wood pulp content, Tough Deck is produced with a higher resin and polypropylene percentage, including additional UV anti-fade agents. This produces a much harder and longer lasting composite material.

Anti-Slip - Tough Deck is manufactured with two different anti-slip sides. Both sides are grooved with added micro abrasions to produce a decking surface that even when wet is highly anti-slip. Tough Deck can therefore be safely enjoyed all year round in all weathers.

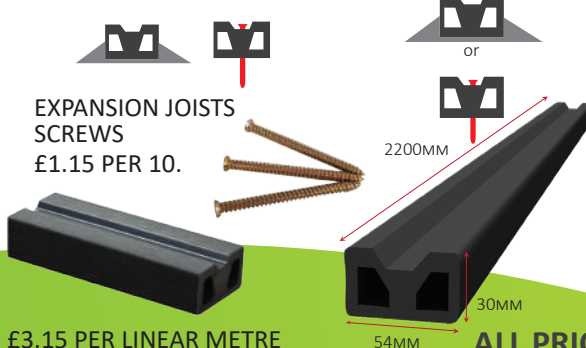

Low Maintenance - When installed correctly Tough Deck requires virtually no maintenance. The decking will not require yearly sealing, varnishing or treating like timber decking. Designed with self cleaning, anti fade and rot resistant properties, Tough Deck requires little to no maintenance.

Pet & Child Friendly - Harmful treatments and chemicals used to treat and maintain wood decking are not required with Tough Deck. Also the surface will not splinter so pets and children can play safely all year round.

Full Bodied Colour - Tough Deck is available in four attractive colours. Because the colour runs all the way through any scratches or damage will be virtually unnoticeable and if needed can be sanded out.

What wood decking can compete with any of the above? Answer: None...
